

Omadbek Qosimov

Backend Python Developer

+998 (94) 444 40 56 | qosimoff06@gmail.com | [LinkedIn](#) | [GitHub](#) | [Telegram](#) |
Tashkent, Uzbekistan

Projects

Texno-Asbob-Bot Built with Python (Django) and PostgreSQL for product catalog, orders, and user management. Integrated Telegram Bot API to handle client interactions: browsing construction materials, placing orders, and sharing delivery location. Implemented an admin workflow: orders are automatically forwarded to a Telegram group with customer details, purchased items, and location. Added order tracking: admins can update order status in the web dashboard once delivery is completed.

Olcha.uz | Python, Django, Django auth, Github, Postgresql | September, 2024 Developed and optimized backend services for Olcha.uz using Python, focusing on efficient data handling, API integrations, and improving system performance. Collaborated closely with the frontend team to ensure seamless user experiences.

Texnomart.uz | Python, Django, Jinja, Django Auth, Github, Postgresql | May, 2024 Wrote an authentication system that allows user to register, login, edit their profile and change or reset their password and Django Social Auth to implement social authentication using OAuth 2.0, the industry standart protocol for authorization.
